2023 Admission

International Students Entrance Examination Graduate School of Societal Safety Sciences

Application Guidelines

- Note 1: Common items of all graduate schools are published in separate files. Please check together.
- Note 2: The application guidelines is the English Version for Japanese-based Program of the International Students Entrance Examination.
- Note 3: The application documents which are designated by Kansai University only have Japanese Version.

Kansai University Graduate School

II Admission Policy

Master's Degree Program

The Graduate School of Societal Safety Sciences accepts those who have the following knowledge and skills, abilities of thinking, judgement, and expression as well as proactive attitudes and deserve as the graduate school students according to the Diploma Policy and the Curriculum Policy of the Graduate School:

- 1. To have strong concerns for social safety and to have acquired basic specialized knowledge and skills in the field of societal safety sciences.
- 2. To be able to think by themselves about the problems of social safety from a global perspective, to access them from versatile viewpoints, such as law and political science, economics and business administration, sociology, psychology, physics, informatics, engineering science, labor and social medicine and so on, and to be able to contribute to society with their strong leadership.
- 3. To have strong willingness to implement research proactively in order to solve the various problems of social safety.

Ph.D. Degree Program

The Graduate School of Societal Safety Sciences accepts those who have the following knowledge and skills, capacities and abilities, and proactive attitudes and deserve as the graduate school students according to the Diploma Policy and the Curriculum Policy of the Graduate School:

- 1. To have strong concerns for the problems of social safety and to have acquired expertise and skills in the field of societal safety sciences.
- 2. To be able to think by themselves about the problems of social safety from a global perspective, to access them from versatile standpoints such as law and political science, economics and business administration, sociology, psychology, physics, informatics, engineering science, labor and social medicine and so on, and to be able to create new academic field of societal safety science, and to contribute to society through creation of new theories and policy proposals for disaster prevention and reduction.
- 3. To have strong willingness to tackle with research proactively in order to solve the various problems of social safety.

V	Application Requirements

Graduate School of Societal Safety Sciences (Master's Degree Program)

Graduate School, Major and Enrollment Capacity

Graduate School	Major	Enrollment Capacity
Graduate School of Societal Safety Sciences	Disaster Prevention and Reduction Major	15

Note1: The Graduate School of Societal Safety Sciences has not established separate enrollment capacity for each type of entrance examination.

Note2: Every lecture shall be done in Japanese, but you can present your master's thesis in English.

Master's Degree Program: International Students Entrance Examination (October Examination and February Examination)

1. Qualification

Applicants who have obtained Level N1 (previously Level 1) on the Japanese Language Proficiency Test (JLPT) or scored 270 points or higher on the subject of Japanese as a Foreign Language (including the writing score) in the Examination for Japanese University Admission for International Students (EJU) which the valid period specified by the issuing institution of the Examination for Japanese University Admission for International Students (EJU) includes the application start date for the Examination Month, (However, a person who has Japanese proficiency equivalent to the level or the score specified in the application qualification may be granted qualification to apply by Pre-qualification Individual Screening.) and who shall satisfy one of the following (1)~(5) conditions:

(including applicants who are expected to satisfy one the following (1) \sim (4) conditions before enrolling at the Graduate School.)

- (1) Applicants who have completed a regular 16-year program of school education outside Japan (Note 1).
- (2) Applicants who have graduated from Japanese universities as international students.
- (3) Persons who have completed a 3-year program or a program of more than 3 years and have been awarded a degree by an overseas university or school (Note 2) which is recognized as being equivalent to a bachelor's degree.
 - (the 2016 ordinance of the Ministry of Education, Culture, Sports, Science and Technology, No. 19)
- (4) Applicants who have completed Specialized Course at Japanese special training schools after the designated date by the minister of MEXT[†] as international students. The training schools must satisfy the conditions designated by MEXT including that the length of term required for graduation be at least four years.
 - † MEXT; Japanese Ministry of Education, Culture, Sports, Science and Technology
- (5) Applicants who are recognized as having scholastic abilities equivalent or superior to the graduates of university through Pre-qualification Individual Screening for Entrance Examination of the Graduate School. (This requirement shall not apply to the foreigners who are recognized as having received Japanese regular school education program.)
 - Note 1: Those enrolled in the following schools are considered to be the same as application qualification (1), as long as the period is less than four years in total.
 - · Elementary school, junior high school, high school etc. based on Japanese school education law
 - · Foreign school in Japan
 - · Overseas educational facilities accredited or designated by the Minister of Education, Culture, Sports, Science and Technology
 - Note 2: The university or the school shall be evaluated by an organization approved by a relevant official institution in the country for their education and research activities or recognized as so by the Minister of Education, Culture, Sports, Science and Technology.

[IMPORTANT] Notes regarding Pre-qualification Individual Screening for Entrance Examination

1. Subjects:

- · Applicants who have the Japanese language ability required as one of the qualification
- · Applicants under qualification (5)
- 2. Application Procedures and Deadline:

Refer to 'I Check Qualification before Applying' (in the separate file "Common Items of all Graduate Schools" p.1).

- (Note 1) Graduates (or those expected to graduate) from less than 16-year program of school education can also apply. In this case, please contact the Muse Office by the submission deadline of the documents for the screening as soon as possible.
- (Note 2) Applicants who have received (or are expected to receive) the degrees in their home countries equivalent to those of Japanese universities can also apply. In this case, please inquire to the Muse office as soon as possible.

2. Application Documents

After you have paid the application fee of ¥35,000, submit the documents listed below.

Review Cautionary Note published at the end of the Application Guidelines (Japanese Version), and carefully check your application documents before submitting them.

Please submit the 'Application Document List (Checklist)' as well as the application documents.

Document to be Submitted [Document Number]	Remarks
Application Form (for submission) [1]	Print out and submit after finalizing your online application.
Statement of Reason for Applying in Japanese [2]	Use the form designated by the University.
Original transcript from previously universities and / or other institutions [3]	If you have transferred from another university to your current university, you also should submit transcripts from the previous universities and / or other institutions as well. Submit original transcripts. If you cannot submit original transcripts, please submit transcripts that have been notarized by an embassy or other public institutions.
Original certificate of (expected) graduation from previously universities and / or other institutions (4)	Both of the entrance and (expected) graduation dates must be listed. If the above information is listed on the Application Document ③, this certificate does not need to be submitted. Submit an original certificate of (expected) graduation. If you cannot submit an original certificate, please submit a certificate of (expected) graduation that has been notarized by an embassy or other public institutions. Note) Applicants with Qualification (3) are required to submit a bachelor's degree certificate in addition to the graduation certificate.
Research Plan in Japanese (5)	About 1,000 words in length. Submit 1 original and 3 copies. Draft an overview of your proposed research plan on a computer using A4-size paper (horizontal text with 40 words per row and 40 rows per page).

Certification for Japanese Language Proficiency (100)	In case of Japanese Language Proficiency Test (JLPT) The original of 'Test Result' or 'Certificate of Result and Score' certificating that you have passed Level N1 (Level 1 of Former Test). *Be sure to submit the original certificate.
	In case of Examination for Japanese University Admission (EJU) The Online Certificate 'Score Confirmation Report' certificating that you have acquired 270 or higher points (including the writing score) in Japanese language as a Foreign Language. Please print out the certificate on A4 paper.
Copy of Residence Card or Passport (1)	For a residence card, submit a copy showing both sides. For a passport, submit a copy of pages showing your name, date of birth, photograph, expiration date, residence status, and the most recent period of stay.
Two Photographs	Affix a photograph taken within the last 3 months to the application form (for submission) and to the statement of reason for applying. Your photographs should not be retouched or edited. (The photograph affixed to your application form will be used on the student ID issued after enrollment, should you be admitted.)

Note: If you have any questions about the application documents, please make sure to contact the Muse Office before the starting date of the Online Application at the earliest possible time.

3. Screening Method

The Graduate School will determine whether or not to admit applicants based on a comprehensive evaluation of document screening, written examination and oral examination.

4. Examination Components

Written Examination	Oral Examination	
Specialized Subject		
10:00 ~ 11:30 (90 minutes)	Held after the written examination	

Note: More information about the oral examination will be provided on the day of the written examination.

5. Examination Details and Allocation of Points

Written Examination (Specialized Subject) (100 Points)	Oral Examination (100 Points)
 Basic question about social science concerning disaster prevention and reduction or basic question about natural science (select 1 question, written) Questions will be set from 'Guidebook of Societal Safety Sciences' (published by MINERVA SHOBO). Queastion about basic knowledge of the desired seminor theme. 	You will be asked about the following points: ① Basic knowledge on the specialist subject ② Research topic and methods after enrollment ③ Details of previous research

Note: Please select a major subject and an academic advisor on applying.

However, academic advisor will be determined by the graduate school based on your wishes when applying. If you select an academic advisor marked **, please contact the Muse office in advance, because there is a semester or two in which they do not teach the subjects as they engage in research, at home or abroad.

The subjects and academic advisors may change as needed. If it changes, we will notify applicants via posting a notice (Japanese Version) on our website, please check our website before applying.

https://www.kansai-u.ac.jp/Gr_sch/>

(2022/4)

Graduate School of Societal Safety Sciences: List of Seminor, Thesis Tutor, and Academic Advisors for 2023 Academic Year (Master's Degree Program)

Disaster Prevention and Reduction

Theme		Academic Ad	lvisors	Contents		
Human-system Group						
Disaster Infomatics	Professor	KONDO, Seiji	Doctor of Informatics (Kyoto University)	In order to create the ideal relation of disaster information and media system, the approach of action research will practice based on human sciences. How the optimum transmission system of early warning should be constructed? How information of reconstruction support should be shared in the affected area? How risk communication should be designed in all phase of disaster risk reduction? In the wide range of research from local to worldwide media systems, the way to solve a variety of problems on disaster information will be investigated.		
Psychology of Risks	Professor	TSUCHIDA, Shoji		Theories in social psychology, such as attitude structure, emotion, social cognition, self-concept, interpersonal relations, communication, group dynamics, and collective behaviors are applied to field cases and studied as researches of (1) risk perception, (2) risk communication, and (3) psychological processes in crisis. The field cases, for example, are public acceptance/rejection and consensus formation processes of science/technology (EMF, nuclear, GMO, etc.), the social psychological responses to disasters and crises (earthquake, tsunami, severe accident, etc.).		
Human Errors	Professor	NAKAMURA, Takahiro	Ph.D. (Osaka University)	In order to secure our social safety, various measures are prepared, and various systems are planned and maintained. On the other hand, it is often pointed out that it has a close connection between the behavior of human and the causes of the disaster. In this class, the relations of human errors and the causes of the disaster are examined while referring to past cases and early research. In addition, effective and practical measures are examined to prevent disasters and accidents.		
Occupational Safety and Health	Professor	HIROKAWA, Kumi	PhD of Psychology, (Kwansei Gakuin University) PhD of Medicine, (Okayama University)	My seminar focuses on working people's health, especially on overwork and mental health, to investigate adverse factors and to find preventive measures. Not only investigating individual health status, but also exploring methods in an organization and/or a community are this seminar's aims to promote working people's health. Students with interests of working people in a society are desirable for my seminar.		

Disaster Psychology	Professor	MOTOYOSHI, Tadahiro	Ph.D. in Educational Psychology (Nagoya University)	In order to effectively communicate risk to the public and to build a sustainable society, we need to know something about how people perceive and react to risk and what kind of information and social systems are appropriate. Social psychological approaches and/or Socio-technological approaches provide a very useful perspective to solve these challenging problems. Research topics include attitude toward disaster risk, community-based disaster prevention, human behavior in evacuation, supporting disaster victims, risk management issues at school and safety for children.
Accident Investigation	Associate Professor	OKAMOTO, Makiko	Ph.D in Human Science (Waseda University)	When an accident occurs, investigate the cause of the accident to prevent recurrence and pursue legal responsibility of the parties. In this exercise, topics are the design of the accident investigation system, the relationship between accident investigation and pursuit of legal responsibility, and the mechanism of occurrence of human error which is the main cause of the accident. Students are required to select research themes of interest from these fields, study and examine them, and deepen their understanding through discussion at the exercise.
Education for Disaster Risk Reduction	Associate Professor	SHIROSHITA, Hideyuki	PhD in Informatics (Kyoto University)	Students are expected to challenge the fundamental questions of safety science such as what disaster management is and how security and safety are defined. The instructor does not take the perspective that disaster education is just knowledge transmission from the experts on DRR to lay people. A theoretical framework which challenges to overcome so-called individual capabilitism must be constructed by the students. Based on the rationale the students are required to do an action research on DRR to improve their theoretical framework.
Theory of Disaster Recovery and Revitalization	Associate Professor	SUGA, Mashiho	Doctor of Philosophy (Kobe University)	Based on the sociological theories and methods, this research focuses on the process of which individuals and groups recover from the damage by disasters. By using case studies, we will focus on how the vulnerabilities and resiliencies in society multiply or mitigate damage. Our research topics are, for example, evacuation and livelihood recovery of individuals and communities from the nuclear power plant disaster or the Tsunami after the Great East Japan Earthquake.
Social sciences for safety	Associate Professor	**SUGAWARA, Shinetsu	Ph.D. in Engineering (The University of Tokyo)	Given the growing complexity of contemporary technologies, it has become increasingly important to incorporate perspectives and insights from social sciences and humanities into their management. Taking nuclear technology as an example, this course explores better ways of managing the safety of complex socio-technical systems. The aim of this course is to help students acquire the necessary knowledge and concepts in the Science and Technology Studies as well as risk governance studies for critically analyzing safety issues at the interface of science, technology and society.
Social-system Group	0			
Risk Management	Professor	KAMEI, Katsuyuki	Ph.D in Commerce (Osaka City University)	In modern society, facing with complicated and socialized risk, it is necessary to carry out social risk management approach. In this course, we try to study the general principle of organizational risk management and its practice from a viewpoint of social risk management. The topics addressed in the seminar include (1) contemporary risk control and risk finance, (2) organization of risk management, (3) risk information disclosure as a means of risk communication, (4) strategy and risk management, (5) leadership and crisis management, (6) SME and risk management, and (7) safety for school and children risk management, etc.

Public health management	Professor	TAKATORIGE, Toshio	Ph.D. in Medicine (Osaka University)	Our focus is on infectious disease, food poisoning, food-related accidents, environmental pollution, drug misuse, violence, and others. Many events can endanger the health and safety of the public. When a huge disaster happens, how we support those affected is also an important research topic. As public health is a multidisciplinary science and practices for population health depends on both the central and local public agencies, it is important to understand the health and social welfare system, and to conduct a comparative study of the public health system in Japan to other countries. The case studies of epidemics and food-related accidents etc. are the main research issues.
Business Law	Professor	TAKANO, Kazuhiko	Doctor of Philosophy in Laws (Chuo University)	While enterprises in Japan have witnessed significant change in their legal systems and social environment, they are not dealing with these changes very well, thereby contributing to frequent corporate scandals. It can be said that corporate legal knowledge and awareness of compliance are absolutely essential qualities for a successful modern entrepreneur. The research field focusing on business law aims to contribute a practical approach to business ethics, CSR-required business judgment as well as corporate governance, the legal system of internal control, information law, M&A and various other fields including contract law on alliances. Studies based on actual cases and lawsuits will be used.
Disaster Prevention Administration	Professor	NAGATA, Shozo	Doctor of Human and Environmental Studies (Kyoto University)	For coping with disasters, self-help, mutual-help and public assistance are often mentioned. For the situations that cannot be dealt with at a personal, regional, or community level, the public sector has to be involved. Thus the administration and politicians are expected to play large roles. What kinds of systems should be created and what kinds of administrative management should be exercised in order to maximize the function of the administration in dealing with disasters? And what kinds of policies should be implemented in order to improve effectiveness? And how should politics address a crisis? Research guidance will be provided from the perspectives of public administration, public policy and political science. Field work and debates will be conducted as needed.
Economic Analysis of Disasters and Public Policy	Professor	NAGAMATSU, Shingo	Ph.D. (Osaka University)	This seminar will focus on the use of public policy to address safety and security issues that threaten human lives and social economic activities, such as natural disasters, manmade accidents, terrorism, health risks from chemicals, pandemics, and suicide. Students are expected to think and work from economic point of view, and also expected to have a compassionate heart, an accurate knowledge of scientific facts and policy practices, and a analytical mind to study policies under economic and public policy theory.
Policy and Law	Professor	YAMASAKI, Eiichi	Doctor of Informatics (Kyoto University)	Ensuring safety and security are the primary responsibility of national and local governments, which administer a variety of regulations, benefits, and services to do so. The legal system provides the basis for such activities, and in this course we will pursue research focusing on administrative law. Our efforts must go beyond simply explaining the legal system and assessing its status quo as we are required to discover problems with the design and implementation of laws based on that explanation and assessment and then study solutions to those problems in a calm and reflective manner. We will define the problem domain broadly to include not only natural disasters, which is my area of expertise, but also manmade disasters.

				Insurance has the institutional function of improving
Insurance Science	Associate Professor	KUWANA, Kinzo	Doctor of Philosophy in Environmental Studies (Sophia University)	social welfare through disaster prevention and mitigation. In addition, contemporary society is characterized by policy measures that utilize various types of insurance (automobile liability insurance, earthquake insurance, nuclear energy insurance, etc.), and policymakers have been studying use of global warming insurance in recent years as a way to facilitate adaptation in response to the issue of global warming. My lab is exploring new schemes through analysis that focuses on the economic functions of policies that utilize such insurance. Naturally, this analysis also focuses on effective use of insurance in a business management context. I target specific examples and offer a practical explanation of the functions of insurance.
Science/Engineering	g-system (Group		
Seismic performance evaluation and seismic design	Professor	ICHII, Koji	Doctor of Engineering (Kyoto University)	Evaluation of the seismic performance of structures and performance-based seismic design are key issues to mitigate earthquake disaster. Both field measurements and numerical analysis are fundamental approaches to consider these issues. In this lecture, students will learn the skills of measurement and analysis, and discuss the most appropriate solutions to the problem from the viewpoints of performance and costs. Application of recent technologies to the problems will be also discussed.
Iinjury prevention enginnering for production safety	Professor	ITO, Daisuke	Doctor of Engineering (Nagoya University)	Injuries occur when excessive forces act on the human body and occur in various forms from familiar accidents to traffic accidents. In this seminar, we will investigate the mechanism of injury occurrence from a mechanical point of view and study injury prevention and mitigation methods based on the mechanism using experiments, accident investigation as well as computer simulations. In addition, since pre-accident behaviors and judgments play important roles in the occurrence of injuries, students who wish to conduct researches on the analysis of these factors are also welcomed.
Integrated Disaster Reduction	Professor	OKUMURA, Yoshihiro	Ph.D in Informatics (Kyoto University)	A Mega disaster is a big threat to the sustainable society. In Japan, Nankai Trough Earthquake, Tokyo Metropolitan Earthquake and Super Tyhoon have been assumed to occur in the near future, resulting in 1,000 or more people dead or missing. This seminar aims to minimize such a future mega disaster from the integrated disaster reducion approach, combining natural science and social science. Implementation research is conducted in the actual society, in addition to theoritical reaserch and analytical research based on the civil engineering.
Simulation of Accidents	Professor	KAWAGUCHI, Toshihiro	Ph.D. in Engineering (Osaka University)	The risk of crowd accidents should be taken into account at any place where many will likely gather. The detailed analysis of crowd accidents is not very easy since the experimental studies of such accidents are too dangerous. Therefore, numerical simulations can be a powerful tool for the analysis of crowd accidents. The mechanisms that lead to the development of crowd accidents and/or the spatial distribution of the forces acting on people in such situations are analyzed to obtain the valuable knowledge for prevention of crowd accidents.

Urban Disaster Mitigation	Professor	KOSHIYAMA, Kenji	Doctor of Philosophy in Engineering (Kobe University)	Urbanization increases the complexity of the relationship between urban areas and disasters. Therefore, we must develop more sophisticated countermeasures for disaster mitigation in urban areas. This seminar's research focuses on the use of urban planning and community design technology for reducing urban natural and social risks. The theory of urban disaster mitigation from past experiences such as the recovery and reconstruction of cities is important for predicting future problems in urban disaster mitigation. These researches will use a multidisciplinary approach that includes both the natural and social sciences.
Geodisaster	Professor	KOYAMA, Tomofumi	Ph. D, Land and Water Resources Science (Royal Institute of Technology, KTH, Sweden)	Numerous geodisasters such as landslides and slope failures caused by earthquakes and rain are occurring worldwide, and they are exhibiting increased scale and changing characteristics in recent years in the wake of extreme weather events caused by climate change, major earthquakes, and other phenomena. Through broadranging research, we are seeking to elucidate the mechanisms behind such geodisasters and to establish technologies for their prevention and mitigation. While quantitative analysis forms the central thrust of our methodology, we employ a multifaceted approach that combines experimentation, measurement, monitoring, and other techniques. The course seeks to foster practical problem-solving skills through a series of research activities, thereby preparing students to play a leading role in international society.
Hydrosphere Disaster	Professor	TAKAHASHI, Tomoyuki	Doctor of Engineering (Tohoku University)	Many hydrosphere disasters have occurred in the last decade, such as the Tohoku Tsunami in 2011, the Indian Ocean Tsunami in 2004, and Hurricane Katrina in 2005. This research field focuses on predicting mechanisms of hazards and disaster mitigation measures. Research methods will include numerical modeling, remote sensing, field investigation and hydrodynamic experiments. The research aims also include facilitating the development of problem-solving skills in other disciplines.
Seismology and Earthquake Disaster Reduction	Professor	₩HAYASHI, Yoshinari	Doctor of Science (The University of Tokyo)	Seismological research and applied research for earthquake disaster reduction are major topic of this lecture. The main research method is seismological wave analysis that includes hypocenter determination, source mechanism estimation and source process analysis. We can use many seismic records of strong motion, high sensitivity signals, and broadband instrumentation from the data center. The purpose of this lecture is the quantitative modeling of natural hazards using recorded data.
Principle of Engineering System Safety	Professor	HOSOKAWA, Shigeo	Doctor of Engineering (Kobe University)	This seminar focuses on the safety of the thermal energy systems/plants such as boiler, nuclear and thermal power plants and chemical plants, and discusses on the current topics in the field of plant safety, the thermal hydraurics in the systems, the accident investigation system for prevention of recurrence, and the safety management methods. In this seminar, documents are read by taking turns to support the students study activities. Students' oral presentations will be conducted in the seminar.

Information Security	Associate Professor	KONO, Kazuhiro	Ph.D. in Engineering (Osaka University)	Achieving the protection of personal and privacy information is one of the most important issues in the real or digital world. We investigate and develop a method for protecting and utilizing personal and privacy information for the viewpoint of information technology. We discuss technologies for guaranteeing anonymity on the Internet represented by anonymous communication, K-anonymity and differential privacy. We also establish a system that satisfies both protection and utilization of information. In addition, we perform programming and numerical experiments in order to confirm the availability of our system.
----------------------	------------------------	----------------	--	--

Graduate School of Societal Safety Sciences (Ph.D. Degree Program)

Graduate School, Major and Enrollment Capacity

Graduate School	Major	Enrollment Capacity
Graduate School of Societal Safety Sciences	Disaster Prevention and Reduction Major	5

Note1: The Graduate School of Societal Safety Sciences has not established separate enrollment capacity for each type of entrance examination.

Note2: Generally allmost all lectures shall be done in Japanese.

However there are a few lectures you can take in English.

So please take advice from your tutor before applying.

E-mail: safety_science@ml.kandai.jp

You can present your doctorial thesis in English.

Ph.D. Degree Program: International Students Entrance Examination (October Examination and February Examination)

1. Qualification

Applicants who have obtained Level N1 (previously Level 1) on the Japanese Language Proficiency Test (JLPT) or scored 270 points or higher on the subject of Japanese as a Foreign Language (including the writing score) in the Examination for Japanese University Admission for International Students (EJU) which the valid period specified by the issuing institution of the Examination for Japanese University Admission for International Students (EJU) includes the application start date for the Examination Month, (However, a person who has Japanese proficiency equivalent to the level or the score specified in the application qualification may be granted qualification to apply by Pre-qualification Individual Screening.) and who shall satisfy one of the following (1)~(5) conditions:

(including applicants who are expected to satisfy one the following (1) \sim (3) conditions before enrolling at the Graduate School.)

- (1) Applicants who have received a master's or professional degree at the graduate schools outside Japan.
- (2) Applicants who have received a master's or professional degree from Japanese graduate schools as international students.
- (3) Applicants who have completed programs and received degrees equivalent to a master's degree from the United Nations University*.
 - *United Nations University; established by the resolution of the General Assembly of the United Nations on December 11, 1972, as stipulated in Article 1 Paragraph 2 of the Act on Special Measures incidental to Enforcement of the Agreement between the United Nations and Japan regarding the Headquarters of the United Nations University.
- (4) Applicants designated by the minister of MEXT[†]. (Bulletin No. 118 of 1989) † MEXT; Japanese Ministry of Education, Culture, Sports, Science and Technology
- (5) Applicants who are recognized as having degrees equivalent or superior to a master's degree by our graduate school and have reached the age of 24 (before enrolling at the Graduate School). This requirement shall not apply to the foreigners who are recognized as having received Japanese regular school education program.

[IMPORTANT] Notes regarding Pre-qualification Individual Screening for Entrance Examination

- 1. Subjects:
 - · Applicants who have the Japanese language ability required as one of the qualification
 - · Applicants under qualification (4) or (5)
- 2. Application Procedures and Deadline:
 - Refer to 'I Check Qualification before Applying' (in the separate file "Common Items of all Graduate Schools" p.1).

2. Application Documents

After you have paid the application fee of ¥35,000, submit the documents listed below.

Review Cautionary Note published at the end of the Application Guidelines (Japanese Version), and carefully check your application documents before submitting them.

Please submit the 'Application Document List (Checklist)' as well as the application documents.

Document to be Submitted [Document Number]	Remarks			
Documents to be submitted by all applicants				
Application Form (for submission) [①]	Print out and submit after finalizing your online application.			
Statement of Reason for Applying in Japanese or English [2]	Use the form designated by the University.			
Original transcript from previously graduate school [3]	Submit original transcripts. If you cannot submit original transcripts, please submit transcripts that have been notarized by an embassy or other public institutions.			
Original certificate of (expected) completion from previously attended graduate school, or a notarized document certifying (expected) completion [4]	Both of the entrance and (expected) completion dates must be listed. If the above information is listed on the Application Document ③, this certificate does not need to be submitted. Submit an original certificate of (expected) completion. If you cannot submit an original certificate, please submit a certificate of (expected) completion that has been notarized by an embassy or other public institutions.			
Ph.D. Degree Program Research Plan in Japanese or English [5]	About 2,000 words in length. Submit 1 original and 3 copies. Draft an overview of your proposed research plan on a computer using A4-size paper (horizontal text with 40 words per row and 40 rows per page).			
Certification for Japanese Language Proficiency [①]	In case of Japanese Language Proficiency Test (JLPT) The original of 'Test Result' or 'Certificate of Result and Score' certificating that you have passed Level N1 (Level 1 of Former Test). ★Be sure to submit the original certificate. In case of Examination for Japanese University Admission (EJU) The Online Certificate 'Score Confirmation Report' certificating that you have acquired 270 or higher points (including the writing score) in Japanese language as a Foreign Language. Please print out the certificate on A4 paper.			
Copy of Residence Card or Passport [1]	For a residence card, submit a copy showing both sides. For a passport, submit a copy of pages showing your name, date of birth, photograph, expiration date, residence status, and the most recent period of stay.			
Two Photographs	Affix a photograph taken within the last 3 months to the application form (for submission) and to the statement of reason for applying. Your photographs should not be retouched or edited. (The photograph affixed to your application form will be used on the student ID issued after enrollment, should you be admitted.)			

Document to be Submitted [Document Number]	Remarks			
Applicants who are eligible under qualification (1) to (3) above and have already submitted a master's thesis				
Outline of master's thesis in Japanese or English [6]	About 2,000 words in length. Submit 1 original and 3 copies. Draft on a computer using A4-size paper (horizontal text with 40 words per row and 40 rows per page).			
Copy of master's thesis [7]	4 copies			
Research Results 【⑨】★If applicable	A reprint or copy of any academic articles, conference presentations, research reports or any other research papers. If the documents can be submitted, submit 4 copies.			
Applicants who are eligible under qualification (1) to (3) above and expect to submit a master's thesis				
Outline of thesis intended to be submitted as master's thesis in Japanese or English [6]	About 2,000 words in length. Submit 1 original and 3 copies. Draft on a computer using A4-size paper (horizontal text with 40 words per row and 40 rows per page).			
Research Results 【⑨】★If applicable	A reprint or copy of any academic articles, conference presentations, research reports or any other research papers. For documents that can be submitted, submit 4 copies.			
Applicants who are eligible under qualification (4) or (5) above and those with a professional degree (or who are expected to obtain one) and have not written a master's thesis				
Results Report in Japanese or English [8]	About 2,000 words in length. Submit 1 original and 3 copies. Draft on a computer using A4-size paper (horizontal text with 40 words per row and 40 rows per page).			
Research Results (9)	4 reprints or copies each of academic articles, conference presentations, research reports and any other research papers prepared on a computer using A4-size paper (horizontal text with 40 words per row and 40 rows per page).			

Note: If you have any questions about the application documents, please make sure to contact the Muse Office before the starting date of the Online Application at the earliest possible time.

3. Screening Method

The Graduate School will determine whether or not to admit applicants based on a comprehensive evaluation of document screening, written examination and oral examination.

4. Examination Components, Examination Time and Allocation of Points

Written Examination	Oral Examination	
Specialized Subject		
$10:00 \sim 11:30 \ (90 \ \text{minutes})$	Held after the written examination	

Note: More information about the oral examination will be provided on the day of the written examination.

5. Examination Details and Allocation of Points

Written Examination (Specialized Subject) (100 Points)	Oral Examination (100 Points)
seminor theme.	You will be asked about the following points: ① Evolving knowledge on the specialist subject ② Research topic and methods after enrollment ③ Details of previous research

Note: Please select a major subject and an academic advisor on applying.

However, academic advisor will be determined by the graduate school based on your wishes when applying. If you select an academic advisor marked **, please contact the Muse office in advance, because there is a semester or two in which they do not teach the subjects as they engage in research, at home or abroad.

The subjects and academic advisors may change as needed. If it changes, we will notify applicants via posting a notice (Japanese Version) on our website, please check our website before applying.
