The Research Institute for Socionetwork Strategies

RISS was adopted as a “Promotion Project for Joint Research between the Humanities and Social Science” from the Ministry of Education, Culture, Sports Science and Technology (MEXT), 2008-2009; modified as a “Promotion Project for Distinctive Joint Research” from MEXT, 2010 -2012. In October 2008, RISS underwent official authorization by MEXT as a Joint Usage/Research Center. As of June 2009, five such authorized Research Centers in the field of economics exist. They include the Institute of Economic Research, Hitotsubashi University, the Institute of Social and Economic Research, Osaka University, the Institute of Economic Research, Kyoto University, the Panel Data Research Center, Keio University, and RISS.

The object of RISS is to create a new field of social science by utilizing advanced information and communication technology and by developing original analyzing tools. 'Socionetwork Strategies' is thus a new field of science that integrates (1) Social Science (Accounting, Management Science, and Economics), (2) Basic Science (Statistics and Mathematics), and (3) Computer Science.

The Society of Socionetwork Strategies

The Society of Socionetwork Strategies was established in July 24, 2004 at the Ikkyu Hall, Kansai University, Japan. The founders included economists and computer scientists. Management scientists have been increasing gradually since 2006. The society has been publishing The Review of Socionetwork Strategies since March 2007.

The Review of Socionetwork Strategies

Aims and Scope

The Review of Socionetwork Strategies promotes data mining and data analysis for business and the economy through interdisciplinary research between computer science and the social sciences. The Review welcomes articles such as those dealing with business, economic and statistical analyses related to large-scale networks, and to huge amounts of data. The focus of The Review of Socionetwork Strategies is on empirical findings, methodologies, and theoretical and conceptual insights across areas of research in policy and in advanced information technology such as cloud computing, data mining, and multi-agent simulation. Areas of interest include, but are not limited to, consumer behavior, corporate strategy, industrial organization, and government policy in the fields of finance, medicine, nursing care, and retail, for example.
